DESCRIPTION

Safety Peakless Helmet

FlexiTog's Peakless Helmet is manufactured to EN397 Standards and is available in 6 bright colours. The lattice frame design helps to absorb energy on impact, while ventilation holes on the top of the helmet ensure that the wearer does not overheat.

This polyethylene helmet is great for wearing with a thermal liner for extra protection in cold areas such as cold stores and freezers. See [FH93L2](#).

Despite its durability, the Peakless Helmet is lightweight and easy to wear.

The one-size-fits-all design also features a special water gutter, ensuring that water channels off of the helmet effectively.

Order the FlexiTog Peakless Helmet online for fast delivery.
